Re: Second Request for Public Comment Concerning the Implementation of Governor
Blagojevich's Proposal for a Sustainable Energy Plan for Illinois

Dear Mr. Stoller:

In response to the Illinois Commerce Commission's ("ICC") request for additional comments, Dynegy Inc. ("Dynegy"), on behalf of its various subsidiaries operating in Illinois, submits the following comments. Dynegy reiterates its support for the efforts of the Governor, the ICC and others to tackle the difficult issues surrounding the creation of a sustainable energy plan for Illinois. It also looks forward to participating in the working group process initiated by the ICC. Such a process proved beneficial in addressing many issues relating to the next phase of the Illinois deregulation efforts—those after the expiration of the mandatory transition period. Several parties noted the connection between the plans being proposed on that topic and the efforts relating to a renewable portfolio standard ("RPS"). In particular, Dynegy supports the proposal of the Ameren companies that the RPS issue be treated as a distribution issue by each utility and *not* as a part of the procurement process that is currently the subject of other docketed cases at the ICC—suppliers should not be responsible for meeting an RPS, the distribution companies should. Please free to contact me if you have any questions regarding this letter.

Sincerely,

Joseph L. Lakshmanan,
Managing Director—Regulatory Affairs
